EDUCATION

Jaypee Institute of Information Technology, Noida

07/2023 - 05/2027

Bachelor of Technology - Computer Science and Engineering

CGPA: 6.2

- **Coursework:** Object-Oriented Programming, Data Structures, Algorithms, Operating Systems, Software Engineering, Database Management Systems

Kendriya Vidyalaya Nausenabaugh

06/2021 - 05/2022

Higher Secondary Education (CBSE – Class 12)

Percentage: 85

- **Coursework:** Studied core subjects including Physics, Chemistry, Mathematics, and Computer Science. Developed a strong foundational understanding of logical reasoning, programming fundamentals (python), and problem-solving

PROJECTS

JIITCommute – Campus Ride Sharing App | ReactJS, Node.js, Express, MongoDB

- Developed JIITCommute, a **full-stack carpooling and commute management platform** featuring JWT-based authentication, trip management, and mobile-first UI with **OTP-based verification** to prevent fraud.
- Implemented **real-time chat rooms with Socket.IO** enabling instant communication between trip members and improving coordination efficiency.
- With over **300+** Registration.

InOut – QR based entry/exit Management system | ReactJs, Node.js, Express, Firebase, Tailwind CSS

- Designed and developed InOut, a **QR-based digital gate entry/exit management system** to replace manual registers **reducing logging time by over 80 Percent**.
- Implemented **role-based dashboards for students, guards, and administrators** enabling secure OTP authentication and real-time access to relevant data.

FruitAI — Fruit Ripeness and Disease Detection System | Python, TensorFlow, YOLOv8, Streamlit

- Built an end-to-end fruit analysis system using **MobileNetV2, YOLOv8, and CLIP** to classify fruits, estimate ripeness percentage, detect diseases, and predict shelf-life with a clean analytics dashboard.
- Designed a modern Streamlit UI featuring real-time webcam scanning, gauge-based ripeness meter, disease overlays, nutritional insights, and automatic result logging with **downloadable JSON reports**.
- Achieved a robust hybrid ML pipeline combining CNN classification, color-based ripeness scoring, and object detection to deliver accurate fruit quality assessment with **interactive graphs and session history**.

TECHNICAL SKILLS

Languages: C, C++, JavaScript, HTML, CSS, SQL

UI/UX and Design Tools: Figma, Userflow design, Wireframing and Prototyping

Frameworks/Libraries: React.js, Express.js, Node.js, Mongoose, Bootstrap

Developer Tools: Postman, Git, GitHub

Cloud/Databases: MongoDB Atlas, MySQL, Render, Vercel

ACHIEVEMENTS & CERTIFICATIONS

Roblo UI/UX Hackathon – Participant  | Devised a **healthcare application** leveraging multiple fine-tuned LLMs

Competitive Programming Achievements | Solved **100+ problems** across [CodeChef](#) and [LeetCode](#)

LEADERSHIP & MENTORSHIP

Management Head, AITronics Hub — Led the "Innovate 1.0" event, overseeing end-to-end planning and execution for **100+ attendees** and **30+ participants**
