EDUCATION

Jaypee Institute of Information Technology, Noida

07/2023 - 05/2027

Bachelor of Technology - Computer Science and Engineering

CGPA: 6.2

- **Coursework:** Object-Oriented Programming, Data Structures, Algorithms, Operating Systems, Software Engineering, Database Management Systems

EXPERIENCE

Freelance - SECTET | ReactJS, Node.js, Express, MongoDB

- Engineered **3+ encryption and decryption algorithms** to secure sensitive user communication and protect application data.
- Constructed backend **cryptographic modules** enabling encrypted data transmission and secure storage across multiple API endpoints.
- Strengthened application security by integrating advanced encryption techniques and improving secure request handling across services.

PROJECTS

JIITCommute – Campus Ride Sharing App | ReactJS, Node.js, Express, MongoDB

- Created a **full-stack campus ride-sharing platform** using ReactJS, Node.js, Express, and MongoDB with secure **JWT authentication** and OTP verification.
- Integrated **real-time messaging using Socket.IO WebSockets**, enabling instant communication between trip members and improving ride coordination.
- Architected scalable **REST APIs** and optimized database queries for ride listings, trip requests, and user management supporting **300+ users**.

InOut – QR based entry/exit Management system | ReactJS, Node.js, Express, Firebase, Tailwind CSS

- Developed a **QR-based digital gate entry system** replacing manual registers and streamlining campus security operations.
- Implemented **role-based dashboards** for students, guards, and administrators with secure OTP authentication and real-time entry logging.
- Reduced manual entry processing time by over **80%** through automated QR scanning and real-time database updates.

FruitAI — Fruit Ripeness and Disease Detection System | Python, TensorFlow, YOLOv8, Streamlit

- Developed an **AI-powered fruit analysis system** using MobileNetV2, YOLOv8, and CLIP to classify fruits, detect diseases, and estimate ripeness.
- Constructed a hybrid **computer vision pipeline** combining CNN classification, object detection, and color-based ripeness scoring.
- Delivered an interactive **Streamlit analytics dashboard** enabling real-time webcam scanning, visual disease overlays, and downloadable JSON reports.

TECHNICAL SKILLS

Languages: C, C++, JavaScript, SQL **Frontend:** React.js, HTML, CSS **Backend:** Node.js, Express.js **Tools:** Git, GitHub, Postman **Cloud/DB:** MongoDB Atlas, MySQL, Vercel, Render

ACHIEVEMENTS & CERTIFICATIONS

Rablo UI/UX Hackathon – Participant  | Prototyped a **food discovery application** with intelligent filtering features
Competitive Programming Achievements | Solved **100+ algorithmic problems** across [CodeChef](#) and [LeetCode](#)

LEADERSHIP & MENTORSHIP

Management Head, AITronics Hub — Led the "Innovate 1.0" technical event, coordinating logistics, team management, and execution for **100+ attendees** and **30+ participants**
